EDUCATION

UniversityOf Houston-Clear Lake – Houston, Texas

Data Science – Master of Science

GPA: 3.5/4.0

Aug 2024 – Present

Vellore Institute of Technology – Amaravathi, India

Computer Science Engineering – Bachelor of Technology GPA: 8.0/10.0

Aug2020 – May2024

Extracurricular: Member, IEEE Student Branch, VIT-AP

Participated in workshops on Python, machine learning, and IoT. Contributed to technical paper discussions and hackathons focused on AI-based healthcare solutions.

SKILLS

Core Competencies: Machine Learning, Data Analysis, Deep Learning, Data Preprocessing & Feature Engineering, Exploratory Data Analysis (EDA), Model Evaluation & Tuning, NLP, Statistics, Linear Algebra, Object-Oriented Programming, Data Structures & Algorithms, DBMS, Version Control (Git)

Programming languages & Software: Python, R, SQL, Java, HTML/CSS; experienced with NumPy, Pandas, Scikit-learn, TensorFlow, Keras, NLTK, Matplotlib, Tableau, MySQL, Git, and Jupyter Notebooks.

PROFESSIONAL EXPERIENCE

Corizo – Data Science Intern; Hyderabad, India

JAN2024 – MAY2024

- Developed machine learning models to predict stock price movements, enhancing forecast accuracy and supporting investment decisions.
- Performed data cleaning, transformation, and feature engineering on large financial datasets to improve model performance.
- Conducted exploratory data analysis (eda) to identify key trends and patterns influencing stock prices.
- Implemented time series analysis techniques to capture temporal dependencies in stock market data.
- Utilized Python tools and libraries such as Pandas, NumPy, Scikit-Learn, and Matplotlib for data Processing, modelling, and visualization.
- Collaborated with the team to present insights and model results, enabling data-driven strategy development.

WORKSHOPS

Arduino and Raspberry pi -Attended Arduino and embedded C programming workshops, completed Health Monitoring Systems

PROJECTS

Diabetes Prediction

Aug2020–Dec2020

- Developed a machine learning classification model with 92% accuracy using the Pima Indians Diabetes Dataset, aiding early diagnosis and treatment.
- Implemented the model using Python, employing scikit-learn and visualization libraries for Interpretability.

Fake News Detection

Jan2021-Mar2021

- Designed a web application to identify fake news using natural language processing techniques.
- Integrated ML algorithms like Logistic Regression and TF-IDF for high accuracy in classification tasks.

Text Based Emotion Classifier

Aug2022-Dec2022

- Built a project where it detects the emotion in the text and classifies the various emotions present in the text.
- Mainly used Machine algorithms like Logistic Regression and Count Vectorizer to classify the emotions.

RESEARCH

CLASSIFICATION OF SKIN LESIONS USING DCNNs' -AP, India

Aug2023-Dec2023

- Optimized advanced Deep Convolutional Neural Networks (DCNNs) including VGG16, Inception ResNet V2, Inception V3, and DenseNet201 for accurate skin cancer classification using the HAM10000 dataset.
- Achieved 91.48% accuracy through Ensemble Learning techniques, outperforming individual model performances.
- Fine-tuned pre-trained DCNN models end-to-end, significantly improving classification performance and demonstrating the effectiveness of transfer learning.

BRAIN TUMOR DETECTION AND CLASSIFICATION -AP, India

Aug2022-Dec2022

- Led the development and deployment of advanced deep learning models for brain tumor classification, achieving a high diagnostic accuracy of 99.79% using the ResNet50V3 architecture.
- Utilized and compared multiple CNN architectures including ResNet50V3, VGG-16, InceptionV3, and custom CNNs to evaluate model performance.
- Leveraged pre-trained models on large-scale datasets like ImageNet and applied data segmentation techniques to enhance accuracy with low-resolution MRI scans.

CERTIFICATIONS

Received outstanding award in skin lesion detection using DCCN'S as demonstrated in the final year capstone project.
