PROFESSIONAL SUMMARY

Results-driven Data & Business Intelligence Analyst with hands-on experience delivering end-to-end analytics solutions using Power BI, SQL, and Python across supply chain, retail, financial, and healthcare domains. Skilled in dashboard design, DAX modeling, predictive modeling, and translating complex business requirements into actionable data-driven insights that improve operational efficiency. Google Data Analytics certified. M.S. Data Science, University of Houston – Clear Lake (2026). Available immediately with 3 years US work authorization (OPT + STEM OPT).

CORE SKILLS & TECHNOLOGIES

Analytics & BI: Power BI, Tableau, Excel (Advanced), DAX, KPI Reporting, Dashboard Design, Data Visualization, EDA, Forecasting, A/B Testing **Programming:** Python (Pandas, NumPy, Scikit-Learn, Matplotlib, TensorFlow), SQL, R, HTML/CSS

Databases & Cloud: PostgreSQL, MySQL, Azure (Fundamentals), AWS (Data Engineer – In Progress) **Tools:** Git, Jupyter, VS Code, JIRA, Microsoft Office Suite

Business Skills: Requirements Gathering, Stakeholder Reporting, Process Improvement, Supply Chain Analytics, ETL, Data Warehousing, Cross-functional Collaboration, Agile

EDUCATION

M.S. Data Science — University of Houston – Clear Lake (GPA: 3.3/4.0) Aug 2024 – May 2026 | Houston, TX

B.Tech Computer Science Engineering — Vellore Institute of Technology (GPA: 8.0/10.0) Aug 2020 – May 2024 | India

PROFESSIONAL EXPERIENCE

Data Science Intern | Corizo

Jan 2024 – May 2024 | Hyderabad, India

- Developed ML models using Scikit-Learn to predict stock price movements across 5+ market indices, improving forecast accuracy by ~12% and supporting data-driven investment strategy decisions.
- Performed end-to-end data cleaning, transformation, and feature engineering on 2M+ daily financial records using Python (Pandas, NumPy), reducing data inconsistencies by 30% and improving model performance.
- Implemented time-series analysis using ARIMA and rolling window features to capture temporal market dependencies, strengthening predictive model reliability across volatile market conditions.
- Conducted in-depth EDA across multiple market datasets to surface key price trends; translated findings into actionable weekly stakeholder reports delivered to 10+ business users.

PROJECTS

Customer Insights Dashboard — Power BI & Python

Feb 2025 – May 2025

- Delivered a customer analytics solution processing 100K+ records using Python and Power BI to surface segmentation patterns, purchase behavior trends, and regional distribution insights supporting retention strategy.
- Identified high-value customer segments and repeat purchase behaviors; solution adopted into monthly business reporting cycle, improving marketing efficiency and operational decision-making.

Financial Market Analysis — Python & SQL

Oct 2024 – Dec 2024

- Delivered a financial analytics solution analyzing time-series data for 20+ equities using SQL and Python, evaluating stock price movements, trading volumes, and monthly return patterns across diverse market sectors.
- Produced executive-ready visual reports identifying high-performing stocks and return behaviors, supporting data-driven portfolio review and strategic investment decision-making.

Supply Chain Analytics Dashboard — Power BI

Nov 2025 – Jan 2026

- Delivered an end-to-end Power BI supply chain solution with DAX modeling tracking inventory turnover, supplier delivery rates, and logistics KPIs across 6 product categories, reducing manual reporting time from 3+ hours to under 30 minutes weekly.
- Identified demand and supply variability patterns improving operational efficiency, enabling faster data-driven procurement and inventory decisions for cross-functional business stakeholders.

Retail Sales Analytics Dashboard — Power BI

Dec 2025 – Feb 2026

- Delivered an interactive Power BI retail analytics solution processing 12 months of transaction data across 5 regions, replacing manual Excel-based weekly reporting with real-time executive dashboards.
- Enabled live access to sales performance, regional trends, and product category insights, directly supporting inventory planning and strategic sales decisions across departments.

Skin Lesion Classification — Deep CNNs

Aug 2023 – Dec 2023

- Optimized ensemble of advanced DCNNs (VGG16, InceptionResNetV2, InceptionV3, DenseNet201) for skin cancer classification using the HAM10000 dataset, achieving 91.48% accuracy through transfer learning and fine-tuning.
- Received outstanding award for this research project; demonstrated expertise in deep learning model optimization, large-scale medical image data processing, and ensemble learning techniques.

Brain Tumor Detection & Classification — Deep Learning

Aug 2022 – Dec 2022

- Developed and deployed CNN-based model (ResNet50V3) for MRI brain tumor detection and classification, achieving 99.79% diagnostic accuracy through transfer learning, data segmentation, and model optimization.
- Benchmarked multiple CNN architectures (ResNet50V3, VGG-16, InceptionV3) on ImageNet pre-trained models, demonstrating strong performance in medical image analysis and predictive model reliability.
